

DataGlance support model based interface development. Implement interface across heterogeneous Application with easy to use interactive design environment and Data Model.

DataGlance Approach

DataGlance support Interface between Applications at Business Entity level. A Business Entity represents a Business Object within an Application product. It can be a Customer Account, an Insurance Policy, an Invoice, a Purchase Order, a Work Order etc.

A Business Entity is represents in DataGlance as a Data Model.

A Business Entity level approach allows our customers to implement integration either using Point-to-Point or Web Services.

Process Benefit

- Model driven Integration Architecture
- A common platform for Data Modeler, Analysts and Developers
- Define Data Mapping rules between source and target Business Entities
- Define Data Mapping rules with minimum or no knowledge about underlying Data Structure
- Easy upgrade path to meet changing requirements

Technical Feature

- Support Excel worksheet to import and export Data Mapping
- Solution implemented using Metadata based code free solution
- Support Point-to-Point and Service based integration
- Automated Mapping Documentation
- Interface development independent of Data Source
- Built-in support for comprehensive error handling
- Built-in support for Monitoring Interface process
- Integrated support for Data Profiling, Data Quality and Validation
- Reduce Development and Maintenance cost

Supported DataSource

DataGlance, MapPlus supports different data sources and data in different format.

Supported Database

- Oracle
- IBM DB2 (Open and Main Frame)
- MS SQL Server
- Lotus Notes
- Access
- MySql
- Sybase
- Postgres
- Any other databases with JDBC and ODBC drivers
