

DataGlance

Data Simplified

ServicePlus Data Sheet

DataGlance product, ServicePlus provides a comprehensive platform to build and deploy services based on Service Oriented Architecture (SOA).

ServicePlus Usage

- Develop interface between Application
- Develop and expose a common set of services that can be invoked using a standard URL
- Combine data from multiple Application/Data Sources into a single XML
- Perform XML transformation. It can be used to implement a data hub to receive XML data in various formats and transform it to a company wide standard XML format
- Build interface for Application that only support XML based interface
- Build a bridge for a Application that does not support data in XML format
- Build Custom Web Based User Interface to an Application
- Extract database data in XML format
- Access Report using a Web Browser

DataGlance Approach

DataGlance approach is based on a philosophy that Services can be defined using a Business Object. A Business Object represents a Business Entity that captures all the relevant information related to it. A Business Object may represent a Work Order, a Purchase Order, etc.

A Business Object data is processed using XML. This allows the user with minimum or no experience with XML and Web Services to develop, test, and deploy a Web Service.

Product Features

- Built in XML Designer to define XML data format
- View the XML data generated by a Service before it is available as a Web Service
- Build and expose services using a standard http/https URL
- Built in Mapping and Transformation capability to define XML transformation
- Combine XML data from multiple Application/Data Source into a single XML

Supported Database

- Oracle
- IBM DB2 (Open and Mainframe)
- MS SQL Server
- Lotus Notes
- Access
- MySql
- Sybase
- Postgres
- Any other databases with JDBC and ODBC drivers

ServicePlus Data Sheet

Supported Platform
