

SOLUTION-SUITE  
POWERED BY DATAGLANCE™

# eMaintain

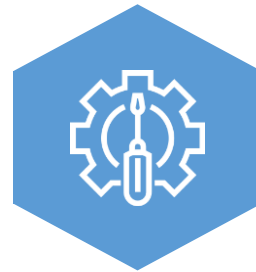

DataGlance eWork solution for Mobile Work Execution that improves business performance

## IS PAPER SLOWING YOU DOWN?

Do you have an initiative to transform your paper-based work processes to digital?

DataGlance's eMaintain solution transforms your paper-based work packages – *work orders, procedures, drawings, manuals, forms, permits, material lists, work history, and media* – into organized, validated digital packages ready for field use in both connected and disconnected environments.

## eMaintain

In service at leading Energy Industry companies throughout North America, eMaintain is a proven electronic work package solution supporting performance of over 500,000 electronic work packages every year.

DATAGLANCE™

# What do your work packages consist of?

DataGlance's eMaintain solution creates complete, organized electronic work packages; automatically drawing and validating data and documents from your Enterprise Asset Management, Electronic Document Management, Supply Chain, and other systems.

## eMaintain Standard Features

- Provides an end-to-end solution from electronic Work Package (eWP) generation to QA record archiving
- Includes work station and mobile (iOS, Windows, and Android) applications
- Enables work execution in connected and disconnected modes with smart sync
- Allows simultaneous eWP execution by multiple users with automatic data merge
- Possesses fully configurable workflows
- Provides business unit level user interface definitions
- Supplements Enterprise Asset Management (EAM) platforms with automatic and configurable data sync

**DATA GLANCE™**

## eMaintain Improves Work Quality, Efficiency and Data Capture

- Create and assemble eWPs automatically; eliminating administrative time and materials
- Validate eWP data and documents; ensuring work is performed to the latest work instruction and document versions
- Automatically generate and file quality assurance records; eliminating administrative work and related data capture errors
- Enhance work tracking; enabling real-time / near real-time work coordination and schedule management
